

# FEEDBANK 40

---

## INCLUDED PARTS:

|                    |                         |
|--------------------|-------------------------|
| (1) Feeder         | (1) Steel Strap         |
| (1) Camo Strap     | (2) Feed Ports          |
| (2) 1/4-20" Bolts  | (6) 1/4" Lock Washers   |
| (4) Fender Washers | (4) T-Style Thumb Bolts |
|                    | (1) Cover               |

1. Unpack the Feedbank from the box.
2. Place the cover on the feeder so that the name reads forward.
3. Take your steel strap and bolt it to the back of the feeder with (2) 1/4-20" bolts and (2) lock washers.

4. To install the feeder port, first take a t-style thumb bolt and slide a lock washer on and then a fender washer. Take the t-style thumb bolt with washers and slide the bolt from the inside of the port out. Match up to the treaded insert at the bottom of the body of the feeder and screw the bolt to it, attaching the feed port. Do the same thing to the second bolt for that feed port. Repeat this for all ports.

## FEEDBANK 40

---

5. Attach camo strap around the steel strap and attach the Feedbank to your desired post or tree.

6. Feedbank 40 can attach to a tree, fence post or t-post.

7. Fill with feed. All feed ports slide in and out when t-style thumb bolt is loosened, to control flow. Set flow according to type of feed you are using.
8. Your Feedbank is ready.
